BPC DECKING - MODERN TRENDS OF LIVING & FLOOR CARE

HKS Garden Decking: Technical Information & Care Guide

1. BPC Decking (Bamboo Plastic Composite)

Key Features & Benefits

BPC decking is the perfect choice for outdoor installations, combining the natural look of wood with advanced durability.

- **Highly Resistant:** Splinter-free, waterproof, and highly resistant to insects, mold, and cracking.
- **Low Maintenance:** Requires no additional protective coatings or sealing.
- **Easy Installation:** No special tools required. It can be worked just like natural wood using a standard saw and power drill.
- **Seamless Look:** Achieve a nearly invisible finish using our specialized stainless steel installation clips.

Important: To guarantee the durability and positive characteristics of our BPC decking, it must be installed using the designated system components. Using alternative components may negatively impact the lifespan of your deck.

Restrictions of Use

BPC must **not** be used for:

- Damp areas with insufficient or poor air circulation.
- Environments with extreme temperature fluctuations (e.g., saunas).
- Load-bearing structural frameworks.

2. Hardwood Decking

Premium Quality & Sustainability

HKS hardwood decking is renowned for its excellent technical characteristics, superior durability, and an exclusive, vivid appearance that elevates any outdoor space.

- **Responsibly Sourced:** We work in close cooperation with trusted manufacturers in Southeast Asia and South America who practice responsible forest management.
- **Guaranteed Sustainability:** We guarantee that HKS Garden products come exclusively from reliable, sustainable, and well-known manufacturers.

General Rules for Hardwood

- **Outdoor Nature:** A terrace deck is a natural outdoor surface, not indoor living room flooring.

- **Natural Variety:** Hardwood is a natural product and will display an enormous, beautiful variety of natural characteristics, grains, and tones.
- *For detailed technical guidelines, please consult the instructions in our HKS Garden brochure.*

3. Care and Maintenance Guide

Thanks to their hard surfaces, our deckings are highly resistant to environmental impacts and require minimal maintenance. Follow these guidelines to keep your deck looking its best:

General Cleaning

Stain/Dirt Type	Recommended Cleaning Method

Light dirt, mud, algae, or moss	Warm water, mild dish soap, or a dedicated deck cleaner. Scrub with a hard plastic brush. For heavy dirt, a rotary disc sander equipped with a deck cleaning brush may be used.
Oils, greases, & spilling liquids	Clean **immediately** using warm water and dish soap.
Obstinate stains (e.g., rust)	Use a brass wire brush or fine-grit sandpaper.
Ferric tannin discolorations	Clean with oxalic acid (strictly follow the specific usage instructions), then treat the decking with a protective oil.

Surface Protection & Scratch Repair

- **Furniture Care:** Place plastic or felt sliders under all furniture legs, flower pots, and sunshade stands to prevent scratches.
- **Fixing Scratches & Burn Marks:** Carefully buff out minor damage using steel wool, fine sandpaper, or an abrasive fabric.
- **Debris Removal:** Regularly clear out dirt, leaves, and debris from the gaps between the decking boards to ensure proper drainage.
